

OS input, less 2 Components.

Will forward balance ASAP.

Note [redacted] requirement
for Computer grade space. In talking
to [redacted], we have concluded that this
is a new requirement ~~that~~ that had
not been reflected in the earlier
non-office surveys of June & July of 1981

3 FEB 1983

MEMORANDUM FOR: Chief, Building Planning Staff,
Office of Logistics

ATTENTION: FROM:

Information Systems Security Group, OS

SUBJECT: Information Surveys - New Headquarters
Building

REFERENCE: Memorandum for R. Wagner, DDA, from C/BPS/OL,
dated 26 January 1983, same Subject

1. The Information Systems Security Group, Office of Security (ISSG/OS), anticipates a dramatic expansion of space and equipment requirements through the year 1989, thus, it seems logical to project our office needs through that year rather than to 1987 as requested.

2. Basically, our current projections are for feet of office space which includes 600 square feet of vault space suitable for central processing-type computer equipment. The equipment planned for installation will require only one special or 220-volt electrical service line; however, this requirement could change depending on the model, etc., of the equipment selected and/or the possible availability of surplus equipment resulting from changes in the needs of the Office of Data Processing. Resolution of this problem is expected within CY 83. It should be noted that the above equipment will require the usual air handling equipment to counteract the heat generated during processing. Attached are the requested forms executed in accordance with your instructions.
